DVD 5 Pitart Specification
Printable Area Shaded in Gray

118 mm OD

46 mm ID
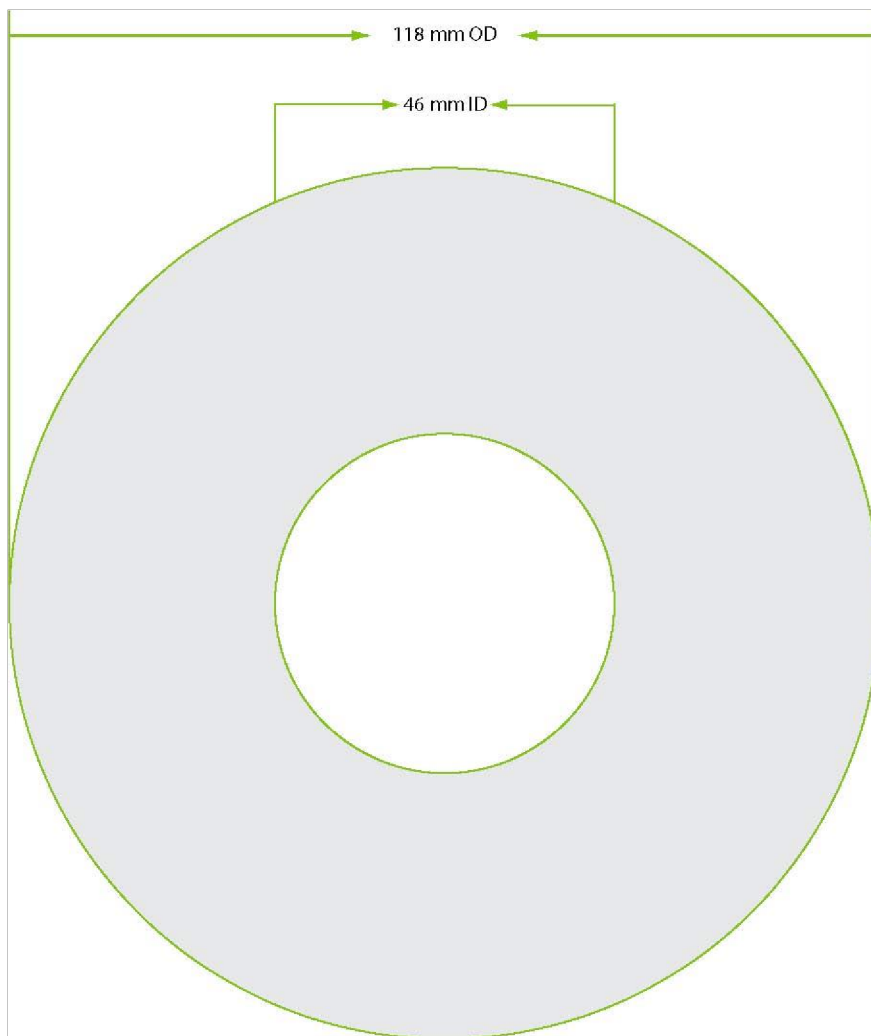

Quick Reference Label Art
Specifications and Design Tips

o   Submit all Label Art in black and white copy.

o   Electronic file format only (Film is not acceptable).

o   When submitting Label Art for Pitart reproduction, every element within the design that appears black will be reproduced as a mirror element on the replicated discs. The remaining area of the disc will appear frosted. Conectiv recommends avoiding large areas of black within your design to minimize the appearance of minor defects in the mirrored areas.

o   Label Art may contain graphic elements. However, Conectiv recommends designing the Label Art using text rather than graphic elements.

o   Pitart film is output at 150 LPI.

Pitart Example
Logos and text were black in the Label Art file.
