

CONNECTIV | Vinyl Record Audio Runtimes

Format	For best quality and volume (minutes per side)	Recommended maximum minutes per side	Maximum minutes per side with manageable sound and volume impact
12", 33 RPM LP	< 18 min.	22 min.	25 min.
10", 45 RPM	< 7min. 30s	9 min. 15s	10 min. 30s
7", 45 RPM Single	< 3 min. 15s	4 min. 30s	5 min. 15s
12", 45 RPM	<12 min.	15 min.	17 min.
10", 33 RPM	< 11 min	13 min. 30s	15 min. 30s
7", 33 RPM	<4 min. 30s	5 min. 30s	6 min. 15s

Note: the above recommendations are intended as guidelines. In practice, maximum runtime is a balance between desired playback level, bass impact, and fidelity. Material that is loud, bass-heavy, wide in stereo, and dynamically extreme will require shorter side lengths to maintain reliable playback quality.
